PROFESSIONAL SUMMARY

Senior Data Engineer with 5+ years designing, migrating and running data platforms across cloud and on-premise environments. Currently own near real-time BI streaming infrastructure on GCP at Sportserve, from ingestion to recovery. Previously architected an enterprise warehouse across 20+ source systems, moved 15+ systems to Snowflake, and led an on-premise to Databricks and Snowflake lakehouse migration. Known for taking end-to-end ownership of reliability, governance and data quality, and for translating between BI, warehouse and engineering teams.

CORE COMPETENCIES

- Data Engineering & Pipelines (ELT/ETL, Batch & Streaming, CI/CD)
- Cloud Data Platforms (GCP, Snowflake, Databricks, Azure)
- Data Governance & Quality (MDM, Validation, Quality Frameworks)
- Data Architecture & Modelling (Warehousing, Lakehouse, Data Vault)
- Cloud Migration & Modernisation (On-prem to Cloud)
- Analytics Enablement (BI, Reporting Layers, Feature Engineering)

TECHNOLOGIES

Cloud & Warehouse	GCP (BigQuery, Cloud Run, Cloud Functions, Firestore, GCS, Cloud Scheduler, Eventarc) · Snowflake · Databricks · Azure (ADF, Synapse, Data Lake)
Pipelines	dbt · Apache Kafka · Apache Airflow · PySpark · Eventarc · REST APIs · CI/CD
Languages	Python · SQL · PySpark · R · ABAP
Tools & Dev	Docker · Git · GitHub / GitLab / Bitbucket · ERWIN · DBeaver · Jira · Collibra · Unity Catalog
Visualisation	Power BI · Tableau · Looker Studio

PROFESSIONAL EXPERIENCE

Senior Data Engineer – BI Streaming Platform · [Sportserve](#) Jan 2026 – Present

- Took ownership of the CRM activation platform through handover and stood up its pre-production environment across six markets (LATAM, India, Japan, Rest of Asia, Rest of World and a brand market): Cloud Functions, Cloud Run, Eventarc, Firestore, GCS and APIs, with CI/CD for Cloud Run services.
- Built and shipped server-side tracking that streams successful-deposit events from the payments pipeline to GA4 via Google Tag Manager, with player-level user IDs, a currency dimension and success and failure logging in BigQuery.
- Delivered a server-side GTM marketing-campaign integration from investigation to production in about five weeks; now extending it to near real-time first-time-deposit tracking and handing knowledge over to the team.

- ▶ Designed and deployed a Firestore-to-BigQuery backfill solution to recover missing records, and hardened production pipelines through runtime upgrades, duplicate removal, scheduler fixes and a documented review of game-provider Cloud Functions.
- ▶ Partnered with business analysts on payments intelligence: built BigQuery tables and monitoring views for affiliate statistics, bank-transaction matching and payment-provider reconciliation.

Data Engineer · [DataSeal Software](#)

2024 – 2025

- ▶ Designed and implemented scalable data pipelines and integration frameworks across multiple enterprise data sources.
- ▶ Led transition from on-premise data solutions to cloud-based architectures, leveraging Databricks and Snowflake.
- ▶ Built and optimised data ingestion and transformation pipelines within a lakehouse architecture (Medallion: Bronze → Silver → Gold).
- ▶ Developed feature engineering workflows using PySpark to support predictive analytics models (XGBoost, Random Forest, TFT).
- ▶ Applied DevOps practices, Unity Catalog governance, YAML scheduling, and modular Python wheel-based pipeline design.

Data Architect · [DataSeal Software](#)

2023 – 2024

- ▶ Designed and governed enterprise data architecture and integration frameworks across 20+ source systems.
- ▶ Implemented multi-layered data architecture: raw ingestion → integration → Data Vault → dimensional modelling → reporting layers.
- ▶ Established data quality and validation frameworks, improving accuracy and trust in reporting datasets.
- ▶ Applied MDM strategies, PII/PHI masking, RBAC, indexing, and partitioning for governance, security, and performance.
- ▶ Collaborated with architects, SMEs, and stakeholders to translate business requirements into logical and physical data models.

Data Analyst / Data Modeler · [DataSeal Software](#)

2022 – 2023

- ▶ Integrated 10+ source systems into a Common Information Model (CIM) for consistent and unified reporting.
- ▶ Conducted reverse engineering of 40+ schemas and supported migration of 15+ source systems to Snowflake EDW.
- ▶ Designed dimensional data models (facts and dimensions) and developed source-to-target mapping frameworks.

Data Quality Auditor · [Bureau Veritas](#)

2021 – 2022

- ▶ Ensured data accuracy and compliance through auditing, validation, and analytical reporting processes.
- ▶ Delivered analytical insights to support operational decision-making; maintained high standards of data quality and reporting integrity.

IT Support Specialist · [Don's Technologies](#)

2019 – 2021

- ▶ Provided technical support, software maintenance and troubleshooting for business clients.
- ▶ Set up networking and infrastructure, including CCTV and connectivity solutions.
- ▶ Supported website development, technical documentation and software rollouts.

SELECTED PROJECTS

Cloud Data Engineering Pipeline (Azure)

- ▶ End-to-end pipeline using Azure Data Factory, Data Lake, Databricks, and Synapse for scalable ingestion, transformation, and BI.

Modern Data Stack (dbt + Snowflake)

- ▶ Built transformation pipelines with dbt on Snowflake; implemented staging, dimensional models, and analytics-ready datasets.

API-Based ETL Pipeline

- ▶ Automated pipelines integrating external API data (Coinbase OHLCV) into PostgreSQL via SQLAlchemy for analytical workloads.

EDUCATION

Bachelor of Science in Statistics and Programming

2015 – 2019

[Machakos University](#)
