Professional Summary

Data Engineer with experience building and optimizing scalable data platforms for analytics and reporting across cloud and on-premise environments. Proven expertise in ELT/ETL pipeline development, data modeling, and cloud migration, with hands-on experience in GCP, Snowflake, Databricks, SQL, and Python. Adept at designing reliable data workflows, supporting modern warehouse and lakehouse architectures, and delivering trusted data solutions that improve reporting, operational visibility, and business decision-making.

Core Competencies

- Data Engineering & Pipelines (ELT/ETL, Batch & Streaming, CI/CD)
- Data Architecture & Modeling (Data Warehousing, Lakehouse, Dimensional Modeling, Data Vault)
- Cloud Data Platforms (GCP, Snowflake, Databricks, Azure)
- Data Governance & Quality (MDM, Data Validation, Data Quality Frameworks)
- Cloud Migration & Modernization (On-prem to Cloud, Data Platform Transformation)
- Analytics Enablement (BI, Reporting Layers, Feature Engineering)

Technologies

Python, SQL, PySpark, BigQuery, Snowflake, Databricks, Airflow, dbt, Git, Docker, REST APIs

Professional Experience

Data Engineer – BI Streaming Platform

Sportserve | Jan 2026 – Present

- Designed and operated cloud-native data ingestion pipelines on Google Cloud Platform, enabling scalable and near real-time data delivery for BI systems.
 - Built and maintained serverless data workflows using Cloud Run, Cloud Functions, and Cloud Scheduler for automated data processing.
 - Managed ingestion and storage of high-volume data into BigQuery and Google Cloud Storage, supporting downstream analytics and reporting.
 - Improved data pipeline reliability and observability by monitoring workflows, troubleshooting failures, and resolving data freshness issues.
 - Led and supported data backfill and recovery processes, ensuring completeness and accuracy of critical datasets.
 - Contributed to CI/CD-driven deployment pipelines, automating Cloud Run services and Eventarc triggers across environments.
 - Collaborated with Data Warehouse and BI teams to ensure consistent and reliable data delivery for analytics use cases.
 - Supported the setup and configuration of GCP resources (Firestore, GCS, service accounts) to enable scalable and secure data architectures.
-

Data Engineer

DataSeal Software | 2024 – 2025

- Designed and implemented scalable data pipelines and integration frameworks across multiple enterprise data sources.
 - Led the transition from on-premise data solutions to cloud-based architectures, leveraging Databricks and Snowflake.
 - Built and optimized data ingestion and transformation pipelines within a lakehouse architecture.
 - Developed feature engineering workflows to support predictive analytics and business optimization.
 - Delivered analytics-ready datasets and reporting structures to support BI tools and decision-making.
 - Applied DevOps practices and modular pipeline design to improve scalability and maintainability.
-

Data Architect

DataSeal Software | 2023 – 2024

- Designed and governed enterprise data architecture and integration frameworks, enabling scalable data warehousing and reporting across multiple business domains.
 - Defined and executed data migration and integration strategies across 20+ source systems, enabling consolidation into unified warehouse environments.
 - Designed and implemented multi-layered data architecture frameworks incorporating raw ingestion, integration layers, data vault modeling, dimensional modeling, and reporting layers.
 - Established data quality and validation frameworks, improving accuracy, consistency, and trust in reporting datasets.
 - Applied Master Data Management (MDM) strategies to ensure entity consistency across the data lifecycle.
 - Designed and optimized data warehouse models (fact and dimension structures) to support scalable reporting and analytical workloads.
 - Improved data platform performance and scalability through optimization techniques such as partitioning, indexing, and efficient data structuring.
 - Strengthened data security and governance practices, including role-based access controls and masking of sensitive data (PII/PHI).
 - Collaborated with architects, SMEs, and business stakeholders to translate requirements into logical and physical data models aligned with enterprise standards.
-

Data Analyst | Data Modeler

DataSeal Software | 2022 – 2023

- Integrated data from 10+ source systems into a Common Information Model (CIM), enabling consistent and unified reporting.
- Developed source-to-target mapping frameworks and collaborated with ETL teams to ensure accurate and reliable data transformation.
- Supported migration of 15+ source systems from on-premise environments to Snowflake-based enterprise data warehouses.
- Conducted reverse engineering of 40+ schemas and subject areas, enabling accurate modeling and integration of legacy systems.
- Designed dimensional data models (facts and dimensions) to support enterprise reporting and analytical workloads.
- Strengthened data validation and integrity processes, including referential integrity checks and proof-of-concept validations.

- Collaborated with cross-functional teams to support data modeling, ETL alignment, and reporting readiness across multiple projects.
-

Data Quality Auditor

Bureau Veritas | 2021 – 2022

- Ensured data accuracy and compliance through auditing, validation, and reporting processes.
 - Delivered analytical insights to support operational decision-making.
 - Maintained high standards of data quality, consistency, and reporting integrity.
-

IT Support Specialist

Don's Technologies | 2019 – 2021

- Provided technical support, software maintenance, and troubleshooting services for clients.
 - Supported networking and infrastructure setup, including CCTV and connectivity solutions.
 - Assisted in website development, technical documentation, and software support activities.
-

Education

Bachelor of Science in Statistics and Programming

Machakos University | 2015 – 2019

Projects

Cloud Data Engineering Pipeline (Azure)

- Designed an end-to-end data pipeline using Azure Data Factory, Data Lake, Databricks, and Synapse.
- Enabled scalable ingestion, transformation, and analytics workflows for reporting and BI.

Modern Data Stack Project (dbt + Snowflake)

- Built transformation pipelines using dbt with Snowflake as the warehouse platform.
- Implemented staging, dimensional models, and analytics-ready datasets.

API-Based ETL Pipeline

- Developed automated pipelines integrating external API data into structured databases.
 - Enabled scalable ingestion and transformation for analytical workloads.
-

Additional Information

- Strong experience working across cloud and on-premise data environments.
- Passionate about scalable data systems, analytics engineering, and modern data architecture.
- Interests include storytelling, technology systems, finance, and digital innovation.
